

CYBER GRIFFIN

CYBER CAPABILITY ASSESSMENT

Originally developed by the Ministry of Defence's Defence Science and Technology Laboratory, the Cyber Defence Capability Assessment Tool (CDCAT), is specifically designed to assess the current condition and maturity level of your organisation's cyber security risk and associated controls.

POTENTIAL BENEFITS:

- Investment in your cyber security can be prioritised, based on real, comprehensive evidence.
- As CDCAT is not an audit, assessments require significantly less time to complete.
- All contents of the assessment and related meetings are kept confidential, as all of Cyber Griffin's Senior Practitioners are vetted, City of London Police Officers.
- All reports and advice are vendor neutral, ensuring the impartiality and accuracy of the assessment.

CDCAT contains a total of 159 security controls, relating to your people, processes and technology and is able to measure your organisation against a wide range of frameworks and standards, including ISO27001, NIST and Cyber Essentials. You are also able to be measured against the top 23 controls that have been identified by their importance and prevalence, across all other frameworks.

Our qualified Senior Practitioners will attend on two occasions. There will be a short initial meeting to establish the scope of the assessment and which frameworks or controls you wish to be assessed against. The first meeting will also clarify who needs to be present for the main assessment. On the second visit, our Senior Practitioners will ask questions surrounding each control and input your responses in to the tool.

Following our visits, we provide you with a final report, which includes a non-technical executive summary, as well as a more in-depth, technical review, detailing your current vulnerabilities and ways in which they may be exploited. Also included is a return on investment financial impact assessment, which estimates the costs of a security breach at your current maturity level and the investment that would be required to achieve a higher maturity level. This service is also provided with a non-intrusive scan, detailing your organisation's digital footprint on the surface web. The final report, plus the results of your digital footprint scan, can be provided either via email, or delivered face to face.

Assessments can be performed irrespective of an organisation's size, systems, risk or any other context. CDCAT is the definitive means of measuring operational risk to establish effective cyber risk management and can be crucial in creating an actionable plan, in order to drive an organisation's cyber transformation.

TAILORED TO ASSIST YOU

We are an independent, vendor agnostic service, with direct access to Police and Action Fraud databases. Our intelligence led services are continually updated to reflect the most relevant and prevalent threats to your business.

Whether you are a small medium enterprise, or a large corporation, we have a range of services tailored to assist you.

FREE OF CHARGE

All of our services are provided free of charge and designed to be accessible to everyone, whether they have very little knowledge of cyber crime, or are individuals who hold IT security and risk management roles.
